

Welcome to WhirlyGigs!

This project requires a language called ruby and a ruby project called gosu.

INSTALLATION

How to install ruby and gosu in TWO SIMPLE STEPS:

Step 1 Install ruby (Macs come with ruby already installed, so you can go on to step 2 if you have one)

Point your browser to <http://www.ruby-lang.org/en/downloads> and follow the proper instructions for your platform. Upon completion, you should have ruby installed.

Step 2. (Gosu does NOT come with ruby; you would know if you have it)

In a terminal/command line, type:

```
gem install gosu
```

It is now ready to run! Hooray!

It is pretty simple to run. For Windows, all you should have to do is double-click to get it working. For Linux/other, you need to open a command line and navigate (with the command `cd`) to this folder. Type

```
ruby WhirlyGigs.rb
```

That's all! Hope you have fun with this little app!
